WDRS Argon 2.1.1 Reference Sheet

Ref#	System Impact	WDRS area	Summary	Location	Detail	Issue Type
1	System-Wide	Home Page	Misspelling of "Administration" is corrected	Home page, Business Area table	Misspelling of "Administration" is corrected in the last line of the Business Area table.	Administrative
2	System-Wide	Home Page	Activity Summary table is removed	Home page	The default table that displayed all diseases event counts system-wide has been removed from the WDRS home page.	Administrative
3	TB Model	Question Packages	Hospitalization section is adjusted to correctly show/hide subsequent questions needed based on the value selected in the question "Hospital name"	Diagnostic QP, Hospitalization section	In the Hospitalization section of the Diagnostic question package, the selection of "Health Care Facility not listed" for the question "Hosptital name" will display a text field "If not on the hospital list, specify hospital". All other answer selections in "Hospital name" will display the address information already known in the system for that facility.	Software change
4	TB Model	Question Packages	Which City a patient moved to question is now available for data entry in addition to what County a patient moved to during investigation	Demographics QP, Patient Location section	In the Patient Location section of the Demographic question package, the question "What city did patient move to?" is now available when "In state (out of jurisdiction)" is selected in the question "Where did patient move?". The drop down list for the City question will synchronize with the associated County question.	Software change
5	Reference group, TB Model	Question Packages	Adjustments were made to the list of Languages in the system.	Demographics QP, General Demographics section	In the Demographics section of the Demographics question package, the drop down list for question "Preferred language" has been amended to remove "Central Khmer", and "Mon-Khmer (other)". Added "Khmer (Cambodian)", "Chinese (not specified)", "Chinese (other)", and "Mixtec".	Enhancement
6	TB Reference group, TB Model	Question Packages	Adjustments were made to the list of TB Anatomic code descriptions in the system.	Diagnostic QP, TB Screening section	In the TB Screening section of the Diagnostic question package, the drop down list for question "Anatomic code" has been amended to edit the message labels of 6 items to correct misspellings and remove parantheticals.	Software change
7	TB Model	Question Packages	The Molecular testing section was removed from use	Diagnostic QP, TB Screening section	In the TB Screening section of the Diagnostic question package, the question "Molecular testing" and the associated child questions were removed from the user data entry screen.	Enhancement

8	TB Domain	Search	TB Disease events converted from PHIMS into WDRS are now searchable on last 6 digits of RVCT number using the Advanced Search feature	Blue Search button	The background field "(hidden) auxillary field for searching state case number" has been populated with the last 6 digits of of the RVCT number for all TB Disase events that were converted from PHIMS into WDRS. These events are now searchable in WDRS using the Advanced Search functionality in WDRS along with all events newly created inside WDRS.	Data Change
9	TB Domain	CDC Notification	CDC case notification records for TB will be correctly generated from WDRS and the files transferred	NA	The TB case reporting messages for CDC are able to be correctly produced from WDRS TB Disease events to include all needed data element content in the required format. The appropriate events are now able to be appropriately identified and processed for initial transmission to CDC.	Software change
10	Blood Lead Domain	Blood Lead Roster Import	A static roster import of Blood Lead data is loaded into the background of WDRS.	Blood Lead	A static import of data for the Blood Lead program is loaded into the system's background as part of the WDRS project work. Local health will not yet have access to this data until the full Blood Lead program release in 2018.	Data Change

Issue type key:

Administrative	system would have functioned ok without it, but needed to be done
Data Change	data or residual data conversion issue
Enhancement	a change that makes a functioning system work better
Security Change	access changes or data security
Software Change	a change that makes an incorrectly functioning system piece work correctly
